A program developed for the production of high quality fresh apples.

Using extremely high quality nutrients targeted at specific growth stages the AgroBest apple program gives producers the flexibility to manage their crop and maximise their yield. This is achieved by controlling Nitrogen applications and using high uptake trace elements. Calcium is a vital part of the program, we recommend AgroDex CaB for foliar application or CarboCal applied through the irrigation.

As a finishing spray we use AgroDex K35. This is the ideal product for application at this time as it contains no chloride or nitrate which can result in late leaf flush. K35 also contains natural plant regulators and organic acids.

For ease of application AgroBest products are compatible with many insecticides and fungicides.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

#### **NOTES**

- Calcium requirements can be met by utilizing Agrocral 40, Agrodex CaB or Extra Cal depending upon seasonal growing conditions.
- Potassium can be supplied by AgroK 45 or Agrodex K35 as required.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
