In the AgroBest Cheery nutritional program, a cost effective combination of micronutrients, trace elements and NPK plant foods are used to ensure flowering, fruit set, yield and quality.

NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants, which has proven to substantially increase flowering and fruit set.

Frequent applications of calcium are recommended to maintain yield potential and quality. To ripen and fill the crop we also recommend AgroDex K35, AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield. Post harvest application is recommended to build reserves for following season.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- To increase carbohydrates in tree, apply NPK in Autumn for better over wintering and more consistent bud burst in Spring.
- Use Fulfil and NPK at Pre and Full blossom to increase fruit set and reduce flowering stress.
- (A) Apply 60L/Ha per season to reduce fruit splitting.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
