The AgroBest Citrus Crop Program is a basic combination of micronutrients, trace elements and NPK plant foods.

Most orchards will require various levels of other trace elements based on soil and leaf test data. Trace elements such as Boron, Zinc, Iron and Magnesium all vital to citrus production, adequate levels must be maintained. The basic crop program is used to ensure flowering, fruit set, yield and quality. NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants, which has proven to substantially increase flowering and fruit set.

Frequent applications of calcium are recommended to maintain yield potential and quality.

To ripen and fill the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield. Post harvest application is recommended to build reserves for following season.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- Apply Boron to soil or foliar at bud burst if required.
- Tissue analysis should be sought to monitor nutrient status of Citrus.
- Zinc and Iron deficiencies can be treated with applications of Agrodex Zn and Agrodex Fe.
- Magnesium should be closely monitored, and treated with Agrodex Mg if required.
- Adjust NPK rates according to plant vigor and results of analysis.
- Adjust K rates according to crop load.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
