PRE PLANT	✓						
POST EMERGENCE					✓		
AT 4-6 LEAF STAGE		✓				✓	
AFTER 6 LEAF STAGE		✓		✓			
AT TASSELING			✓				
KERNEL FILLING							
6 WEEKS BEFORE HARVEST							✓

✓ Shows application of product and timing ✓✓ Shows two applications of product during this growth period.

The AgroBest Corn Crop Program is designed to give the grower the basic requirements for a high yielding, high quality crop.

The program is recommended to be used with a basal fertiliser schedule based on local conditions and crop nutritional requirements. The AgroBest Corn crop program starts with Super Seedtreat, our Zinc (Seaweed based) nutritional seed coating which contains a range of micronutrients. Super Seedtreat has proven to give extremely good early growth response, which sets the crop up for increased yield. Micronutrients and Zinc are used in conjunction with balanced NPK to ensure vigorous growth and production. The program also includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and fruit set.

As a finishing spray we use AgroDex K35. This is the ideal product for application at this time as it contains no chloride or nitrate which can result in late leaf flush. K35 also contains natural plant regulators and organic acids.

For ease of application AgroBest products are compatible with many insecticides and fungicides.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- Apply Super Seedtreat with seed pre planting or in seed box.
- Monitor nutrient status through tissue analysis and adjust timing and application of plant foods accordingly.
- Adjust NPK rates according to plant vigor and seasonal conditions.
- For processing corn varieties, AgroDex K35 will greatly enhance the colour of the grain.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
