The AgroBest Plum crop program is a basic combination of micronutrients, trace elements and NPK plant foods.

Most orchards will require various levels of other trace elements based on soil and leaf test data. The basic crop program is used to ensure flowering, fruit set, yield and quality. NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants, which has proven to substantially increase flowering and fruit set.

Frequent applications of Calcium are recommended to maintain yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium. The product has Boron and Nitrogen for increased efficiency.

For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients.

To ripen and fill the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

NOTES

- Adjust AgroDex K35 rates according to crop load.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
