6-8 LEAF (LARGE ROSETTE)			✓		
PRE FLOWERING (HOOK)				✓	
POST FLOWERING					✓ ✓

✓ Shows application of product and timing

✓ ✓ Shows two applications of product during this growth period.

A cost effective combination of micronutrients and plant foods are used to ensure plant establishment and flowering.

NPK levels are varied to accommodate various growth stages. Post flowering applications of the unique Potassium spray, AgroDex K35 are used to maximise yield. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which can result in leaf flush. K35 also contains natural plant regulators and organic acids.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- (A) Can be tank mixed and applied with aircraft

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
