In the AgroBest Strawberry nutritional program, a cost effective combination of micronutrients, trace elements and NPK plant foods are used to ensure flowering, fruit set, yield and quality.

NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and fruit set.

For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients.

Frequent applications of Calcium are recommended to maintain yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium in early stages. The product has Boron and Nitrogen for increased efficiency. For later growth stages, we recommend CarboCal, which is unique Calcium fertiliser free of nitrates and chlorides.

To ripen and fill the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

NOTES

- AgroDex CaB, Fulfil, AgroDex K35 or 3-10-15 applications from fruit set to end of harvest every 10-14 days or with American varieties apply on fruit flushes.
- Trace Elements - If leaf analysis shows extra trace elements are required, apply 2L per hectare of Micronutrients.
- For Potassium applications apply either 3-10-15 or AgroDex K35, do not apply both.
- For improved disease management, use Extra Cal with fungicidal sprays.
- Use Calmate with all soluble and liquid fertilizer applications.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
