The AgroBest Grape Crop Program is a flexible nutrition program designed to increase yield and quality.

A wide range of trace elements including Calcium, Zinc and Magnesium are included for strategic application. These are all produced using the AMCA System, which guarantees very high uptake, and plant availability. The program includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and yield.

Frequent applications of Calcium are recommended to maximise yield potential and quality. Calcium also plays a major roll in disease control.

For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients. This product will build vine strength and give healthier growth next season, with more even flowering and better fruit retention.

To ripen and fill the crop we have included, AgroDex K35, a nitrate and chloride free Potassium product with organic acids and natural plant regulators. Being nitrate free, K35 will not produce the leaf flush associated with some similar products.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides. AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- Use tissue analysis to monitor nutrient status of vines.
- Adjust plant food rates according to plant vigor and results of analysis.
- Zinc and Iron deficiencies can be treated with applications of Agrodex Zn and Agrodex Fe
- Magnesium should be closely monitored when fruit reach pea size to overcome grape stalk necrosis.
- Use Extra Cal if under high disease pressure at 10L/Ha and add to fungicides replacing Agrodex.
- Adjust K rates according to crop load
- 3-10-15 builds up tree/vine to give stronger healthier growth next season with more even flowering and higher retention of fruit.
- Fulfil must be applied in two applications at correct timing. Three may improve results.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
