In the AgroBest Tomato nutritional program, a cost effective combination of micronutrients, trace elements and NPK plant foods are used to ensure flowering, fruit set, yield and quality.

NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and fruit set. For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients.

Frequent applications of Calcium are recommended to maintain yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium in early stages. The product has Boron and Nitrogen for increased efficiency. For later growth stages, we recommend CarboCal, which is unique Calcium fertiliser free of nitrates and chlorides.

To ripen and fill the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

NOTES

- Monitor nutrient status through tissue analysis and adjust timing and application of plant food accordingly.
- Zinc, Iron, Magnesium levels should be closely monitored and treated with applications of AgroDex Zn, AgroDex Fe and AgroDex mg if required.
- Beyond Foliar 3-10-5 builds up plant to give stronger healthier growth with more even flowering and higher retention of fruit.
- Extra Cal—if high disease pressure apply every week after flowering until crop is finished to maintain protection.
- Apply Calmate with all soluble and liquid applications (Cal Nitrate etc.)

(A) Apply with Cal Nitrate to improve uptake
 This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
