✓ Shows application of product and timing

✓✓ Shows two applications of product during this growth period.

The AgroBest Turf Crop Program begins with our unique soil stimulant Revitalize, which contains a range of microbial agents, stimulants, bacteria & enzymes.

Revitalize is ideal to use after soil fumigants have been applied, as it will re-establish microbial activity in the soil. Revitalize is used with our revolutionary humic acid, Gromate which contains various root and soil stimulants along with proteins, which feed the microbes as they colonise.

**NOTES**

- Add Agrobrest Fish Emulsion to assist microbial activity.
- If fungal disease is present increase rate of Extra Cal to 5-10l/Ha.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
