This is a flexible nutrition program designed to increase yield and quality.

A range of trace elements including Calcium & Zinc are available for strategic application. These are all produced using the superior AMCA System which guarantees very high uptake and plant availability. The program includes Fulfil, a unique formulation of natural growth promotants which has proven to substantially increase flowering and yield.

Frequent applications of Calcium are recommended to maximise yield potential and quality. We recommend AgroDex CAB for high uptake foliar Calcium in early stages. The product has Boron and Nitrogen for increased efficiency. For later growth stages, we recommend CarboCal, which is unique Calcium fertiliser free of nitrates and chlorides.

For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients.

To ripen and fill the crop we have included AgroDex K35, a nitrate and chloride free Potassium product with organic acids and natural plant regulators. Being nitrate free, K35 will not produce the leaf flush associated with some similar products. For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

NOTES

- Revitalize - Apply to moist soil, or immediately before irrigation or cultivation, late winter or early spring.
- Fulfil - Apply at flowering and fruit set stage to increase number of nuts set.
- Micronutrients - Apply after leaf expansion, to supply micronutrients for the season.
- AgroDEX Zn - Apply at nut set or leaf expansion where Zinc is deficient.
- AgroDEX CaB - Apply at nut filling and finishing to improve quality and shelf life.
- Beyond Foliar - Apply at two weekly intervals, ending two weeks before harvest to improve kernel size and flavour.
- Calmate - Apply with Cal & Potassium Nitrate.
- **(A) Shows application of Cal and Potassium Nitrate.**

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
