PRE HARVEST								✓			G		B ✓✓	C ✓✓
✓ Shows application of product and timing                      ✓✓ Shows two applications of product during this growth period.														

The AgroBest Melon crop program is a flexible nutrition program designed to increase yield and quality.

A wide range of micronutrients and trace elements including Calcium, Zinc and Moly are included for strategic application. These are all produced using the AMCA System, which guarantees very high uptake and plant availability. The program includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and yield. Revolutionary products GroMate and CalMate are recommended to increase uptake of all nutrients, especially Phosphorous and Calcium.

Frequent applications of Calcium are recommended to maximise yield potential and quality. We recommend AgroDex CaB (Calcium + Boron) for foliar application or CarboCal applied through the irrigation. For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients. To ripen and fill the crop we have included AgroDex K35, a nitrate and chloride free Potassium product with organic acids and natural plant regulators. Being nitrate free, K35 will not produce the leaf flush associated with some similar products. For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides. To protect fruit from sunburn in periods of high temperature we recommend the use of Envy.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

#### NOTES

- Apply first application at early flowering then second application 14 days later to improve set and extend flowering.
- Apply 2 applications the first 4 weeks before harvest and the second 2 weeks later to maximise size, fruit colour and shelf life.
- Apply Pre Harvest to prevent sunburn

N.B. Calmate can be used with Cal Nitrate & Potassium Nitrate to increase uptake.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
