✓ ✓ Shows two applications of product during this growth period.

The AgroBest Onion crop program begins with our unique soil stimulant Revitalize and Gromate, which contains a range of microbial agents, stimulants, bacteria & enzymes.

Revitalize is ideal to use after soil fumigants have been applied, as it will re-establish microbial activity in the soil. Nutritional recommendations include Micronutrients, Calcium and a balanced NPK.

Frequent applications of Calcium are recommended to maximise yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium. The product has Boron and Nitrogen for increased efficiency.

For maintenance of NPK levels we recommend Beyond Foliar 3-10-15, which has very high-grade raw materials combined with a range of micronutrients.

To ripen and fill the crop we have included AgroDex K35, a nitrate and chloride free Potassium product with organic acids and natural plant regulators.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

NOTES

- Either water or cultivate Revitalize into soil after application.
- Use AgroDex CaB with fungicides to assist in disease control. Use Extra Cal if under high disease pressure.
- Beyond Foliar 3-10-15 contains NPK and Trace Elements to maintain steady growth rate during bulb filling.
- If Zinc deficiency occurs, apply AgroDex Zn as a foliar at 1L/Ha
- AgroDex K35 apply 2 weeks before harvest.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
