In the AgroBest Passionfruit nutritional program, a cost effective combination of micronutrients, trace elements and NPK plant foods are used to ensure flowering, fruit set, yield and quality.

NPK levels are controlled to accommodate various growth stages. The program also includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and fruit set.

Frequent applications of regulated NPK are recommended to maintain yield potential and quality.

To ripen and fill the crop we also recommend AgroDex K35, AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

**NOTES**

- Adjust NPK rates according to plant vigor and results of leaf analysis.
- Adjust Agrodex K35 according to crop load.
- Monitor Zinc, Calcium and Magnesium levels, if necessary apply Agrodex Zn, Agrodex CaB, & Agrodex Mg.
- Apply Agrodex CaB to assist with disease management, Extra Cal if anthracnose is present.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
