The AgroBest Peanut crop program starts with Super Seedtreat, our Seaweed based nutritional seed coating which contains a range of micronutrients.

Super Seedtreat has proven to give extremely good early growth response, which sets the crop up for increased yield.

The program includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and yield.

Frequent applications of Calcium are recommended to maximise yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium. The product has Boron and Nitrogen for increased efficiency.

Micronutrients and Plant Food 13-7-11 are used to maintain vigorous healthy growth and nut filling.

AgroBest Australia recommends that regular soil and plant tissue analysis be carried out for maintenance of correct nutritional levels.

NOTES

- Apply Revitalize 3 to 5 weeks before planting.
- Dilute Super Seedtreat in sufficient water to obtain even seed coverage.
- Monitor nutrient status through tissue analysis to adjust rates of calcium and NPK's.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
