In the AgroBest Pea nutritional program, a cost effective combination of micronutrients, trace elements and NPK plant foods are used to ensure flowering, fruit set, yield and quality.

NPK levels are controlled to accommodate various growth stages.

Zinc is recommended at planting. The program also includes FulFil, a unique formulation of natural growth promotants which, has proven to substantially increase flowering and fruit set.

Applications of regulated NPK are recommended to maintain yield potential and quality.

To ripen and fill the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

For ease of application AgroBest products are compatible with many insecticides, herbicides and fungicides.

NOTES

- Beyond Foliar 3-10-15 contains trace elements for a balanced foliar spray.
- Calcium and Magnesium may be required. If so Agrodex CaB and / or Agrodex Mg.
- Adjust plant food rates according to plant vigor and analysis results.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
