TUBER FORMATION								✓	✓	✓	
EARLY FLOWERING						✓			✓	✓	
TUBER SET						✓				✓	
GOLF BALL SIZE					✓					✓	
TUBER FILLING					✓						✓✓

✓ Shows application of product and timing ✓✓ Shows two applications of product during this growth period.

The AgroBest Sweet Potato Crop Program begins with our unique soil stimulant Revitalize, which contains a range of microbial agents, stimulants, bacteria & enzymes.

Revitalize is ideal to use after soil fumigants have been applied, as it will re-establish microbial activity in the soil. Nutritional recommendations include Micronutrients, Calcium and a balanced NPK.

Frequent applications of Calcium are recommended to maximise yield potential and quality. We recommend AgroDex Ca Plus Boron for high uptake foliar Calcium. The product has Boron and Nitrogen for increased efficiency. For those using Cal Nitrate we recommend CalMate, to increase uptake. Also included in the program is Extra Cal, a unique Calcium blended with a cytokinin carrier. This product is ideal for later application and has a proven ability to get calcium into the fruit.

For maintenance of NPK levels we recommend Beyond Foliar 11-6-9, which has very high-grade raw materials combined with a range of micronutrients. To finish the crop we also recommend AgroDex K35. AgroDex K35 is the ideal product for application at this time as it contains no chloride or nitrate which, can result in late leaf flush. K35 also contains natural plant regulators and organic acids to assist with improved yield.

NOTES

- For Seed Potatoes or if high numbers of tubers are required use Super Seedtreat.
- Use Extra Cal under disease pressure or for improved translocation of Calcium.
- When Plants have commenced to run apply 2 applications of Beyond Foliar 18-2-4 (2 weeks apart).
- Use Beyond Foliar 11-6-9 which contains trace elements for a balanced foliar spray. Use a higher Nitrogen product when required or early in the season.
- Calcium reacts with P, test before tank mixing or apply alone.
- Monitor nutrient status through tissue analysis, and adjust timing and application of NPK accordingly.
- Use Spraytech Oil Multi Purpose Spray Adjuvant to enhance the application of AgroBest's products. Refer Spraytech Oil information sheet for rates.

This program is designed to augment a soil fertility program and is offered as a guide only and dependent on growing conditions i.e. soil, climate, disease etc. Observe correct spray procedures as factors such as temperature, humidity, water rates can effect results. Always check compatibility before mixing products. Grower assumes all responsibility. Monitor nutrient status through tissue and soil analysis.
